

Real-World Test: PurAire Ultra Proves Its Power in a Smoke Filled Cigar Lounge

Last week, we provided our ProMedUSA PurAire Ultra Bipolar Ionizer for a real-world test at the Jacob Ballas Center in Singapore, specifically in their enclosed cigar-smoking room. This space typically hosts three to five cigar smokers, often for several hours, while they enjoy whiskey, good conversation, and relaxation. In other words—an extremely challenging environment for any air-purification system.

The PurAire-ULTRA uses PurAire's Ozone Free Bipolar Ionisation – safe for occupied spaces ... no Ozone, no "Activated Oxygen or Photoplasma" ... just natural negatively charged, and positively charged oxygen ions.

Here's what the users reported:

"We smoked there on Thursday night with four of us in the room. We kept the PurAire Ultra running while we were smoking. Even during the session, the smoke was noticeably and visibly reduced, and the cigar smell was kept to a minimum. When we finished, we closed the door, and left the unit running for several hours. When we returned the next morning, there was no smoke or tobacco smell at all—the room was completely fresh. This is a wonderful product, and we will be purchasing it."

This real-world test showcases exactly what the PurAire Ultra is designed for—rapid smoke removal, odour elimination, and continuous air purification, using PurAire's ozone free, UL2998 Certified Bipolar Ionisation. Even in heavy-smoke environments like cigar lounges and divans, bars, casino's and VIP rooms, and private smoking rooms the PurAire ULTRA eliminates the odours.

If you operate a hospitality venue or private club, casino, restaurant or VIP room and want to eliminate smoke odours naturally and effectively, the PurAire Ultra delivers proven results.
